

 **healthdirect**
Australia

HealthDirect Australia, a public company limited by shares, delivers comprehensive health services wholly or jointly funded by federal, state and territory governments. To provide its services, HealthDirect Australia contracts directly with health providers, developing and managing governance structures to ensure all services are provided competently and safely.

Key Business Needs

HealthDirect Australia was challenged by the need to maintain a high level of security for large volumes of personal and sensitive data, while providing convenient access and availability of data to patients and clients. The organisation wanted to maintain compliance with the Center for Internet Security (CIS) best practice audit framework, while providing easy-to-use reports for IT and management.

Tenable Products Selected

HealthDirect Australia selected Tenable SecurityCenter View™ (CV). Tenable was an ideal solution for the organisation's cloud-based delivery model, enabling it to deploy in the cloud and providing continuous monitoring to both its non-production and production systems to identify vulnerabilities, reduce risk and ensure compliance.

Resulting Benefits

Thanks to SecurityCenter CV, Healthdirect Australia can scan, identify, prioritize and remediate vulnerabilities and misconfigurations, and create automated reports for its IT and management teams. In addition, Tenable is helping the organisation achieve its CIS compliance objectives on an ongoing basis.
